

Front/Top Panel Branding

Custom branding allows for maximum brand exposure

Product Overview

The Nova Kiosk offers the most graphic branding space of any rental kiosk. The Nova's front panel and optional top panel above the monitor can be custom branded with your graphics for maximum brand exposure or instructions on the kiosks' application.

Product Features

- The most graphic branding space of any rental kiosk
- Includes graphics setup at no charge

Artwork Specifications

Kiosks4Rent will do your graphics setup at no charge. Simply provide a high resolution logo or graphic and any font you would like and we will custom design your kiosk art for you. You can also supply camera ready art to the specifications listed below (in order of ideal preference) if you prefer.

Front/Bottom Panel (35.5"H X 19"W)

1. A vector-based Adobe Illustrator file (.ai, .eps, or .pdf), with an Artboard width of 19" and a height of 35.25", with at least a 1/4" (.25") bleed pulled **on all sides. When saving (especially a .pdf), save as a High Print Quality file, and always include unusual type suitcases and make sure that any images are embedded.**
2. A 300 dpi image file (.psd, .jpg, .jpeg, .tif, or .pdf) with a width of 19.5" and a height of 35.75", with no elements such as logo, type, or graphics placed within 1/4" (.25") of the perimeter, to allow for bleeds. PSD (layered file) files should also include unusual typeface suitcases.

19" Monitor Top Panel (16"H X 18"W)

1. A vector-based Adobe Illustrator file (.ai, .eps, or .pdf), with an Artboard width of 18" and a height of 16", with at least a 1/4" (.25") bleed pulled **on all sides. When saving (especially a .pdf), save as a High Print Quality file, and always include unusual type suitcases and make sure that any images are embedded.**
2. A 300 dpi image file (.psd, .jpg, .jpeg, .tif, or .pdf) with a width of 18" and a height of 16", with no elements such as logo, type, or graphics placed within 1/4" (.25") of the perimeter, to allow for bleeds. PSD (layered file) files should also include unusual typeface suitcases.

23" Monitor Top Panel (16"H X 22.5"H)

1. A vector-based Adobe Illustrator file (.ai, .eps, or .pdf), with an Artboard width of 22.5" and a height of 16", with at least a 1/4" (.25") bleed pulled **on all sides. When saving (especially a .pdf), save as a High Print Quality file, and always include unusual type suitcases and make sure that any images are embedded.**
2. A 300 dpi image file (.psd, .jpg, .jpeg, .tif, or .pdf) with a width of 22.5" and a height of 16", with no elements such as logo, type, or graphics placed within 1/4" (.25") of the perimeter, to allow for bleeds. PSD (layered file) files should also include unusual typeface suitcases.
